PROFESSIONAL SUMMARY

Full Stack AI Engineer with 3+ years of experience building production-oriented web applications and AI-powered solutions using Python, FastAPI, React.js, REST APIs, SQL, LLM APIs, RAG pipelines, and vector databases. Experienced across the complete development lifecycle—from responsive frontend interfaces and backend APIs to AI integration, prompt engineering, document processing, authentication, testing, and deployment. Strong ability to translate business requirements into scalable full-stack AI products.

TECHNICAL SKILLS

Frontend	React.js, JavaScript, HTML5, CSS3, responsive UI, component architecture, REST API integration
Backend	Python, FastAPI, Flask, REST APIs, authentication, validation, asynchronous APIs
AI / GenAI	LLMs, OpenAI API, prompt engineering, RAG, embeddings, AI agents, structured output, NLP
Data & AI Storage	PostgreSQL, MySQL, MongoDB, vector databases, ChromaDB, FAISS, SQL
Dev Tools	Git, GitHub, Postman, VS Code, Docker, environment configuration, debugging
Engineering	API design, JSON, webhooks, error handling, testing, logging, deployment, performance optimization

PROFESSIONAL EXPERIENCE

Full Stack AI Engineer | NeuralStack Technologies

Ahmedabad, India | Jan 2024 – Present

- Developed full-stack AI applications using React.js on the frontend and Python/FastAPI services on the backend.
- Integrated LLM APIs into production workflows for intelligent classification, summarization, extraction, recommendation, and conversational experiences.
- Built RAG pipelines using document chunking, embeddings, vector search, retrieval, and grounded response generation.
- Designed REST APIs for user management, AI processing, document workflows, data persistence, and frontend-backend communication.
- Implemented prompt templates, structured JSON outputs, validation, fallbacks, and response handling to improve AI reliability.
- Built responsive React interfaces with reusable components, forms, API integration, loading states, error states, and role-based UI.
- Worked with PostgreSQL/MongoDB and optimized queries and data models for application and AI workloads.
- Used Git/GitHub, Postman, Docker, logging, and automated testing practices to support reliable development and deployment.

Software Engineer | CodeCraft Labs

Remote | Aug 2022 – Dec 2023

- Built responsive React.js dashboards and business applications connected to Python REST APIs.
- Developed backend endpoints using FastAPI/Flask with request validation, authentication, database integration, and error handling.
- Integrated third-party APIs and AI services and transformed unstructured responses into application-ready JSON.
- Created automation and data-processing scripts in Python for document handling, data cleaning, and operational workflows.
- Diagnosed frontend/backend integration issues and improved API response time, reliability, and maintainability.

SELECTED AI PROJECTS

AI Resume Screening & Candidate Intelligence Platform — React.js, FastAPI, OpenAI API, PostgreSQL

Built a full-stack platform where recruiters upload resumes, AI extracts structured candidate information, compares profiles with job requirements, calculates a match score, and routes candidates for review. Added validation, status tracking, and automated notifications.

Document Q&A; RAG Assistant — Python, FastAPI, React.js, Embeddings, ChromaDB

Created an AI assistant that ingests business documents, generates embeddings, retrieves relevant chunks, and produces context-aware answers through an interactive React chat interface.

AI Course Recommendation Platform — React.js, FastAPI, LLM API, REST APIs

Developed a recommendation workflow that captures learner preferences, evaluates available course data, and generates personalized course suggestions with a responsive frontend.

EDUCATION

Bachelor of Technology (B.Tech.) — Computer Science & Engineering

Gujarat Technological University | 2018 – 2022

CERTIFICATIONS

• Generative AI & LLM Application Development • Python & FastAPI • React.js • REST API Development • Prompt Engineering

ATS KEYWORDS

Full Stack AI Engineer, Python, React.js, FastAPI, Flask, JavaScript, REST API, LLM, Generative AI, OpenAI API, RAG, Retrieval Augmented Generation, AI Agents, Prompt Engineering, Embeddings, Vector Database, ChromaDB, FAISS, PostgreSQL, MongoDB, SQL, Docker, Git, GitHub, API Integration, NLP, Machine Learning, AI Application Development
