PROFESSIONAL SUMMARY

Analytical and results-driven **Data Analyst with 4.5 years of experience** leveraging SQL, Python, Power BI, and Tableau to translate complex datasets into actionable business intelligence. Proven track record in automating mission-critical dashboards, optimizing customer acquisition funnels, and building statistical forecasting models that reduced operational churn by 14% and boosted marketing ROI by 22%. Adept at bridging technical data engineering with executive stakeholder strategy.

TECHNICAL SKILLS

Languages & Querying: SQL (PostgreSQL, BigQuery, MySQL), Python (Pandas, NumPy, Scikit-learn), R, Bash
BI & Visualization: Power BI (DAX, Power Query), Tableau Desktop/Server, Looker, Metabase, Excel (VBA, Power Pivot)
Data Platforms & ETL: Snowflake, Google BigQuery, AWS S3, Apache Airflow, dbt (data build tool), Git, JIRA
Analytical Methodologies: A/B Testing, Cohort Analysis, Predictive Modeling, Regression, Customer Segmentation (RFM), Funnel Optimization

PROFESSIONAL EXPERIENCE

Senior Data Analyst

July 2024 – Present

FinScale Solutions Pvt. Ltd.

Bangalore, India

- Architected and managed enterprise analytics pipelines in **Snowflake & dbt**, standardizing KPIs across 6 cross-functional business units and processing over 12M daily transactional records.
- Engineered 14 executive **Power BI dashboards** with automated daily refresh cycles, cutting manual management reporting hours by **75%** (saving ~20 hours weekly).
- Conducted multivariate A/B testing and customer retention cohort analyses that identified checkout bottlenecks, directly improving product conversion rates by **18.4%**.
- Collaborated with ML engineers to build a predictive churn classification model in Python (Random Forest), flagging at-risk accounts with **84% precision**.

Data Analyst

January 2022 – June 2024

NexGen E-Commerce Technologies

Hyderabad, India

- Extracted and transformed complex datasets using advanced **PostgreSQL** window functions, CTEs, and procedures to analyze user lifetime value (LTV) and CAC across multi-channel campaigns.
- Developed interactive **Tableau dashboards** tracking real-time logistics, fulfillment cycle-time, and vendor SLAs, reducing average order delivery latency by **1.8 days**.
- Designed an automated anomaly detection script in Python to monitor inventory discrepancies, preventing stock-out events valued at ~\$110K quarterly.
- Partnered with Product Managers to define and monitor north-star metrics for mobile app features, presenting bi-weekly growth insight decks to executive leadership.

KEY PROJECTS

- Customer Lifetime Value (LTV) & Churn Predictor:** Built an end-to-end Python pipeline analyzing 300,000+ customer transaction histories using BG/NBD and Gamma-Gamma models to forecast 90-day repeat purchases, enabling targeted marketing campaigns.
- Real-Time E-Commerce Revenue Monitor:** Integrated Google Analytics 4 and Shopify APIs via Google BigQuery into Looker Studio, visualizing live conversion funnels and ROAS across paid search and social channels.

EDUCATION & CERTIFICATIONS

Bachelor of Technology (B.Tech) in Computer Science & Engineering

2018 – 2022

National Institute of Technology (NIT) | CGPA: 8.6/10

Certifications: Microsoft Certified: Power BI Data Analyst Associate (PL-300) • Google Advanced Data Analytics Professional Certificate • Snowflake SnowPro Core Certified
